

Vertical Multi-Stage Pump (Submersible Centrifugal Type)

TYPE : VMS-1180

Casing & Outer Shell :

- SS 304 / SS 316 / Duplex SS

Impellers & Diffusers :

- SS 304 / SS 316 / Engineered Polymer

Shaft & Coupling :

- SS 304 / SS 316 / Duplex SS

Operating Limits :

Size : On request (selected to duty point)

Speed : On request (as per motor & duty)

Pressure : On request

Temperature : On request

Representative image

Application :

- Groundwater Extraction (Borewells & Deep Wells)
- Domestic, Commercial & Municipal Water Supply
- Pressure Boosting for Buildings & Networks
- Agricultural & Spray Irrigation
- Construction Dewatering
- Raw-Water Transfer for Treatment Plants
- Cooling-Water & HVAC Make-Up Water
- Washdown Systems & Fountains
- General Clean-Water Transfer

Vertical Multi-Stage Pump (Submersible Centrifugal Type)

Features :

- **Multi-Stage Hydraulic Design** for high-head pressure boosting and deep-well lifting.
- **Vertical Submersible Configuration** minimises floor space and allows submerged installation.
- **Corrosion-Resistant Wetted Parts** with stainless-steel hydraulic components.
- **Integrated Intake Screen** reduces ingress of coarse suspended particles.
- **Low-Vibration Vertical Assembly** for stable operation in borewell, tank, and sump installations.
- **Continuous-Duty Motor Compatibility** for municipal, agricultural, and industrial service.
- **Mechanical Seal Options:** Carbon / Ceramic / NBR standard; SiC / TC / FKM / EPDM optional.
- **Selected to Duty Point:** flow, head, and stage count engineered to the application.

➤ **PERFORMANCE DATA & DIMENSIONS AVAILABLE ON REQUEST**
